

# 361 Seismic Processing Toolkit

## Sub-bottom Data Processing Software For Your Laptop

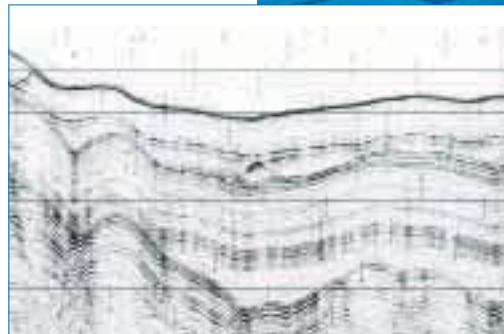

The 361 Toolkit is a simple new approach to post processing software, delivering high performance seismic analysis to any PC at a very low price.

The 361 Toolkit has been developed to be extremely versatile and easy to use allowing sub-bottom profiler data to be quickly reviewed, analysed and incorporated into standard word-processor and CAD documents for final reporting.

The Software enables industry standard SEG-Y data files to be read, displayed and enhanced for analysis on any standard Windows PC, whilst converters are available for other popular formats.

The 361 Toolkit provides the facility for large data sets to be analysed easily and condensed into simple XYZs. This has only traditionally been possible with expensive work stations or by hand from paper records, but now with the 361 Processing Toolkit SEG-Y data from most sources can be analysed and summarised quickly and easily from your laptop.

### KEY FEATURES

- Low cost
- Reads SEG-Y data format
- Reflector picking & digitising
- Windows compatible
- GeoRef bitmap image output
- Gain & TVG correction
- Band Pass Filtering
- Stacking
- Survey line compression utility
- Incorporate image snap shots directly into reports

### BENEFITS

- High performance, low cost
- Quick install on any PC
- No expensive workstations required
- Compatible with industry standard data format
- Instant review of data on any PC
- 24/7 support worldwide
