TITAN VIEWER

TITAN VIEWER is a web based application that allows access to valuable vessel viewing information anywhere internet is available and the user has a registered User ID and valid Password.

Presenting the user with vessel information that is up to date and presented in clear and precise manner, the user has access to quality operational awareness. Having the ability to view the exact position of your ships can sometimes be the difference between customer satisfaction and losing a valuable client. With **TITAN VIEWER**, users are able to provide the precise whereabouts of the vessel in question.

Xanatos Marine has developed the **TITAN VIEWER** with technical and non-technical users in mind. Areas that need to be viewed along with the data that is required can be easily selected and presented in a manner that is uncluttered and meaningful.

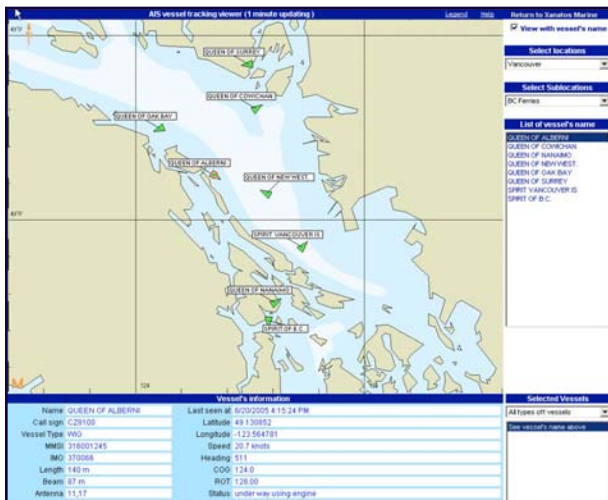

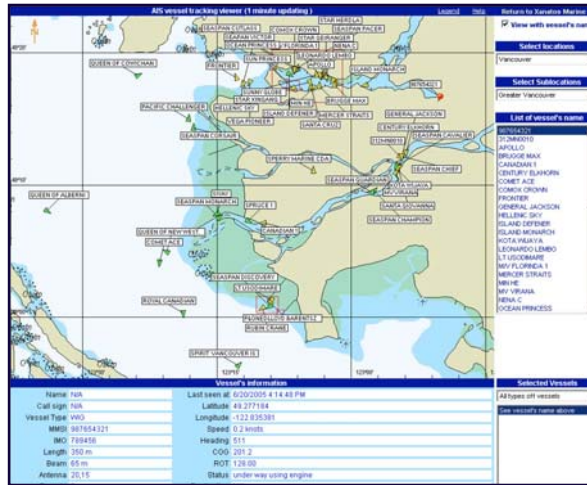

For organizations who are involved in meeting vessels, it provides an invaluable tool that will give up to date information by simply clicking on the ship menu. The system will then find that vessel and highlight it in red. Users are then able to ask **TITAN VIEWER** to present them with a host of information via the drop down menu.

This information comes via a powerful search engine which is attached to a specifically designed SQL Database where all the information is stored to be recalled at the users command.

Selecting specific vessels is a simple matter of asking. Let **TITAN VIEWER** do all the work in sorting through the hundreds of vessels, eliminating those not needed so only the vessel(s) of interest are displayed.

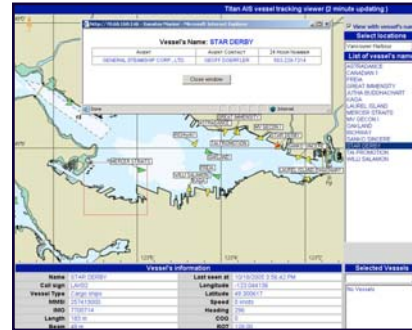

Special symbols have been created which allow visualization of which type of ship is in the area, again, users may easily sort through this to define just one type of vessel.

- TITAN VIEWER** is a great tool to assist a company and their personnel that are directly associated to arrival and departure of marine vessels but do not need all the information of a VTMS.
- Below are a few features of **TITAN VIEWER**:
- ✓ Access anywhere internet access is available 24 / 7
 - ✓ Clear information
 - ✓ Ability to screen vessels based on name or type of vessel.
 - ✓ Ability to color and shape code specific vessels for easy identification
 - ✓ Up to date vessel information
 - ✓ Database for information recall
 - ✓ Monitor ships progress
 - ✓ Customization available
 - ✓ Click of the button results
 - ✓ And more...

TITAN VIEWER

By having different vessels with dissimilar shapes and colors provides a unique method of identifying where ship(s) of interest are located so that are not delays due to too much information presented in the same manner. Details on each vessel can be input by users or retrieved from our database. This will again provide information which is key to smooth operations. An example as shown on the above right attaches the vessel to a Database. By simply clicking on the vessel and drop down menu users can select the information needed.

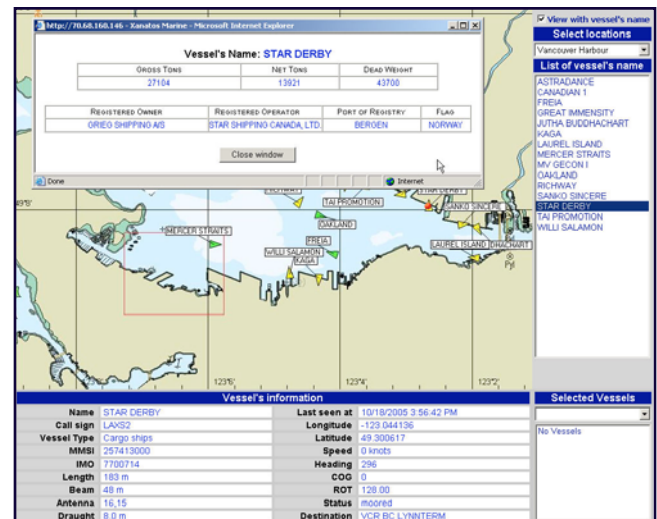

TITAN VIEWER is more than a simple display of information gathered from an AIS Transponder or Receive Only unit. It is an information tool which up until now would require extensive calling and searching just to get what is now available at the click of a button.

The clean simple user interface allows immediate results and a reduction in your already overworked daily schedule. Anything that can be entered into the database can be retrieved.

Xanatos is happy to work with you to customize your requirements and ease the flow of information at your finger tips.

In addition to all this, **TITAN VIEWER** can be used in conjunction with our **TITAN SENTINEL** and **TITAN COASTAL** system as a back up in case of hardware failure or for wider distribution of information from a port.
