

CodaOctopus Product News

6 October 2009

The new Octopus 160™ has an all-new design and is now a compact, rugged and weather-proof sonar interface unit. Compatible with EdgeTech's work-horse 272TD dual frequency sidescan sonar it is simple to operate and is suitable for small boat use.

Key features include:

- highly portable
- full gain and offset controls
- a new, simple user interface runs all controls
- compatible with all popular post-processing systems

The Octopus 160 is housed in a rugged Pelicase, enabling it to be operated with the lid closed. No additional equipment is required to get the 272TD up-and running as it supplies all the power and triggering required. The Octopus 160 can extend the operability of this highly regarded analogue towfish.

Now is the best time to purchase.
